Harm 2 Zero

At Interflow, safety is one of the pillars that underpins everything we do. We are committed to continual improvement in the way we manage our Operations, Environmental and Safety obligations.

Interflow®

h2O

HARM 2 ZERO

To strengthen Interflow's position on our Health, Safety and Environmental (HSE) expectations, we have a corporate HSE strategy underpinned by our vision of Harm 2 Zero (H2O).

To progress this vision, it was recognised that HSE must be embedded in every decision that is made and within every activity that is undertaken. To support the 'Harm 2 Zero' vision, Interflow recognised that HSE is to be managed in a systematic way that is:

Developing, upskilling and empowering all our team members with the appropriate leadership skills to achieve a safe behaviour.

Continually improving our systems and to benchmark our HSE maturity aligned to industry best practice.

Understanding the importance of continually investing in our people that hold critical safety positions.

The objective of H2O is to encourage a values-driven joint approach to HSE, with strong foundation in safety leadership, behaviour and knowledge of risk. HSE is not only about complying with a policy or procedure, rather than to develop our team's knowledge and skills that allow them to drive the correct behaviour throughout all areas of our business.

A safe workplace is everyone's right and everyone's responsibility.

Managing our impact on the environment is an integral part of the way we do business and is considered an essential part of the wider system for the management of our business risk.

Our H2O success is dependent on all leaders and managers showing strong and consistent leadership around health, safety and environment.
